Pulsestar White-Light High Intensity Pulsed Lighting for ANPR/LPR

- High Intensity up to 440W Lighting Drive Power
- · Easily link Lighting Pulse with Camera Shutter
- Platinum Elite twin-core SMT LEDs
- Hot-spot Reduction Technology
- VARIO Interchangeable Lens System

- Angles from 10-35 degrees from 1 product
- Extreme Long-Life and Low Maintenance
- Wide Trigger Input Range (TTL 3.3-24V DC)
- Integrated Pulse Controller
- Universal 100-230V AC PSU (24V DC optional)

Pulsestar White-Light illuminators deliver powerful pulsed lighting for traffic and machine vision applications including ANPR / LPR.

Every Pulsestar illuminator features PLATINUM Elite twin-core SMT LED technology to deliver outstanding illumination power, and provides significant uplifts in illuminator performance compared to equivalent non-pulsed illuminators. A TTL signal from the camera is required to synchronise the lighting pulse with the exposure of the camera, and the power, duration, and frequency of the pulse can all be adjusted for optimal results at each site. Pulsestar illuminators are long life and low maintenance - perfect for difficult to reach transporation applications.

Pulsestar features an interchangeable lens system with Hot-spot Reduction Technology to deliver highly even illumination, where it is most needed, for outstanding images. Pulsestar White-Light illuminators produce up to 440W of Lighting Drive power for traffic applications.

Product Dimensions

Features	Benefits
High Intensity Pulsed Illumination	Delivering up to 440W of pulsed White-Light illumination, Pulsestar illuminators deliver lighting on-demand for ANPR/LPR and Machine vision applications. Pulsed illumination ensures the highest levels of light on scene to illuminate fast moving objects while extending LED life and maximising energy savings.
Camera Sync	A TTL trigger input allows the illumination to be pulsed in syncronisation with the camera shutter to deliver maximum light levels precisely when needed.
Integrated Pulse Controller	An in-built pulse controller allows the timing, height and width, and the lighting pulse to be tailored for the exact needs of the application, and includes an Ethernet-based communication interface making installation, operation, and maintenance safer and easier.
PLATINUM Elite twin-core SMT LED technology	PLATINUM Elite twin-core SMT LED technology allows Pulsestar illuminators to deliver the highest possible pulse intensities for the maximum amount of light on scene.
Individual Illuminator Control System	Each LED panel on Adaptive Illumination™ models can be controlled and operated indivdually via dedicated channels from the PSU, offering greater flexibility for multi-lane installations, mobile applications etc.
VARIO Interchangeable lens system	Angle of illumination can be easily, quickly and precisely adjusted by changing the VARIO holographic lens insert, to match the specific camera field of view.
Hot-spot Reduction Technology (HRT)	HRT - Hot-Spot Reduction Technology delivers a highly diffused, elliptical beam shape to deliver more light where it is needed, generating both longer distances and minimizing light wastage. The HRT system also prevents overexposure of foreground objects.
Active LED Life Control	An Advanced Cool Running™ system draws heat away from the LEDs, shielding the LED from abnormal stress, and allows RayLED LED products to deliver outstanding performance and consistency of illumination throughout the operational life of the illuminator. A long operational life also ensures the lowest maintenance costs, ideal for installations in difficult to reach areas.
Choice of Wavelengths	Lighting to suit a wide range of imaging requirements – Infra-Red 850nm or 940nm, White-Light, and bespoke colour options available.
